### ABOUT

I love building Modern Web Applications, and implementing API's in Java, .NET, Node.JS or Python. I'm an enthusiastic proponent of Automatic Testing, Benchmarking and Build/Deployment processes.

Rigorous adherence to the latest coding patterns and practices is my middle name.

My professional goals include designing the 'next big' Real-time web app, or implementing a cutting edge front-end site (using HTML5 and frameworks like AngularJS or Backbone), or adding modern mapping & spatially aware functionality to your existing technology stack.

## EXPERIENCE

---

Co-Founder and Lead Developer, Property X-Ray  
(<http://xray.keyitonce.com/>)

Conceived and created new technology platform for the Title Insurance industry.

🕒 a year

---

Lead Software Architect, Hillside Software  
(<http://www.hillsidesoftware.com/>)

My responsibilities included hiring and training a development team, coding key features, maintaining app requirements, migrating to a distributed infrastructure, maintained SLA/performance, validated security with internal/external audits.

I managed several major projects, including a real estate website platform for almost 25,000 Realtors.

Another key system I developed allowed someone to search for similar \*looking\* homes simply by taking a photo with their smartphone; we achieved this using a Python photo classifier built with OpenCV.

Aside from all the systems and code, I traveled extensively with sales staff as an onsite tech resource at conventions and presentations; I'm also not shy about public speaking, and I can communicate with the
